Values were rounded in accordance with FDA rounding rules: <http://www.fda.gov/Food/GuidanceRegulation/GuidanceDocumentsRegulatoryInformation/LabelingNutrition/ucm064932.htm>. The orange number indicates the highest value.

1. All of the nuts are unsalted; almonds, Brazil nuts, hazelnuts, pecans and walnuts are unroasted; cashews, macadamia nuts and pistachios are dry roasted.

2. A 2012 study published in the *American Journal of Clinical Nutrition* shows that when measuring digestibility, whole almonds may provide about 20% fewer calories than originally thought. The findings show a one-ounce serving of almonds (about 23) has 129 calories versus the 160 calories currently listed on the Nutrition Facts Panel. Further research is needed to better understand the results of the study and how this technique for calculating calories could potentially affect the calorie count of other foods.
